# Functional Dependencies (FDs)

- Need a special type of constraint to help us with normalization.

$X \rightarrow Y$  is an assertion about relation R that whenever two tuples of R agree on all the attributes in set X, they must also agree on all attributes in set Y.

e.g. Let's say that  $X = \{AB\}$  and  $Y = \{C\}$

R

A	B	C
x1	y1	c2
x1	y1	c2
x2	y2	c3

# Armstrong's Axioms

---

$X, Y, Z$  are sets of attributes

1. **Reflexivity:** If  $Y \supseteq X$ , then  $Y \rightarrow X$ .
2. **Augmentation:** If  $X \rightarrow Y$ , then  $XZ \rightarrow YZ$  for any  $Z$ .
3. **Transitivity:** If  $X \rightarrow Y$  and  $Y \rightarrow Z$ , then  $X \rightarrow Z$ .
4. **Union:** If  $X \rightarrow Y$  and  $X \rightarrow Z$ , then  $X \rightarrow YZ$ .
5. **Decomposition:** If  $X \rightarrow YZ$ , then  $X \rightarrow Y$  and  $X \rightarrow Z$ .

# Example: Closure

---

Given  $F$  (i.e. the Functional Dependencies):

$AB \rightarrow C$

$A \rightarrow D$

$D \rightarrow EF$

$AC \rightarrow B$

Calculate the following closures:

- $A^+$
- $AB^+$
- $AC^+$
- $B^+$
- $D^+$

# Who wants to share their solution?

---

- $A^+$
- $AB^+$
- $AC^+$
- $B^+$
- $D^+$

# Example: Closure

---

- $A^+ = ADEF$
- $AB^+ = ABCDEF$
- $AC^+ = ACBDEF$
- $B^+ = B$
- $D^+ = DEF$

# Example: Minimal Basis/Cover

---

Given a relation  $R(A, B, C, D)$  and a defined set of FDs  $F = \{A \rightarrow BC, B \rightarrow CE, A \rightarrow E, AC \rightarrow H, D \rightarrow B\}$ , find the minimal basis ***M*** of  $F$ .

# Example: Minimal Basis/Cover

---

Given a relation  $R(A, B, C, D)$  and a defined set of FDs  $F = \{A \rightarrow BC, B \rightarrow CE, A \rightarrow E, AC \rightarrow H, D \rightarrow B\}$ , find the minimal basis ***M*** of  $F$ .

## 1<sup>st</sup> Step

$$- \quad H = \{A \rightarrow B, A \rightarrow C, B \rightarrow C, B \rightarrow E, A \rightarrow E, AC \rightarrow H, D \rightarrow B\}$$

# Example: Minimal Basis/Cover

Given a relation  $R(A, B, C, D)$  and a defined set of FDs  $F = \{A \rightarrow BC, B \rightarrow CE, A \rightarrow E, AC \rightarrow H, D \rightarrow B\}$ , find the minimal basis ***M*** of  $F$ .

## 1<sup>st</sup> Step

- $H = \{A \rightarrow B, A \rightarrow C, B \rightarrow C, B \rightarrow E, A \rightarrow E, AC \rightarrow H, D \rightarrow B\}$

## 2<sup>nd</sup> Step

- $A \rightarrow B$ : cannot be removed,  $A^+ = ACEH$
- $A \rightarrow C$ : **can** be removed,  $A^+ = ABC$
- $B \rightarrow C, B \rightarrow E$ : cannot be removed,  $B^+ = BE, B^+ = BC$ , respectively
- $A \rightarrow E$ : **can** be removed,  $A^+ = ABCE$
- $AC \rightarrow H$ : cannot be removed,  $AC^+ = AC$
- $D \rightarrow B$ : cannot be removed,  $D^+ = D$

Step outcome:  $H = \{A \rightarrow B, B \rightarrow CE, AC \rightarrow H, D \rightarrow B\}$

# Example: Minimal Basis/Cover

Given a relation  $R(A, B, C, D)$  and a defined set of FDs  $F = \{A \rightarrow BC, B \rightarrow CE, A \rightarrow E, AC \rightarrow H, D \rightarrow B\}$ , find the minimal basis  $M$  of  $F$ .

## 1<sup>st</sup> Step

- $H = \{A \rightarrow B, \text{X} \rightarrow C, B \rightarrow C, B \rightarrow E, \text{X} \rightarrow E, AC \rightarrow H, D \rightarrow B\}$

## 2<sup>nd</sup> Step

- $A \rightarrow B$ : cannot be removed,  $A^+ = ACEH$
- $A \rightarrow C$ : **can** be removed,  $A^+ = ABC$
- $B \rightarrow C, B \rightarrow E$ : cannot be removed,  $B^+ = BE, B^+ = BC$ , respectively
- $A \rightarrow E$ : **can** be removed,  $A^+ = ABCE$
- $AC \rightarrow H$ : cannot be removed,  $AC^+ = AC$
- $D \rightarrow B$ : cannot be removed,  $D^+ = D$

Step outcome:  $H = \{A \rightarrow B, B \rightarrow CE, AC \rightarrow H, D \rightarrow B\}$

# Example:

---

## 3<sup>rd</sup> Step

$H = \{A \rightarrow B, B \rightarrow C, B \rightarrow E, AC \rightarrow H, D \rightarrow B\}$

# Example:

## 3<sup>rd</sup> Step

$H = \{A \rightarrow B, B \rightarrow C, B \rightarrow E, AC \rightarrow H, D \rightarrow B\}$

$A \rightarrow H$

$A^+ = \{A, B, C\}$

Since C can be derived, it is redundant.

# Example:

## 3<sup>rd</sup> Step

C→H

H = {A→B, B→C, B→E, AC→H, D→B}

$A^+ = \{A, B, C\}$

Since C can be derived, it is redundant.

$C^+ = \{C\}$

Since A cannot be derived, it is not redundant.

# Example:

## 3<sup>rd</sup> Step

C→H

$H = \{A \rightarrow B, B \rightarrow C, B \rightarrow E, AC \rightarrow H, D \rightarrow B\}$

$A^+ = \{A, B, C\}$

Since C can be derived, it is redundant.

$C^+ = \{C\}$

Since A cannot be derived, it is not redundant.

## 4<sup>th</sup> Step

– H doesn't change

Minimal Basis:  **$M$**  =  $H = \{A \rightarrow B, B \rightarrow C, D \rightarrow B\}$

# Checkpoint

---

Given the ERD posted in association to A2 (Ministry of Health), find **two** design flaws in that diagram.

1. Justify your reasoning as to why you think it is a flaw.
2. Explain how you would re-work the ERD/Schema to account for a better overall design.

Write these on a sheet of paper (include your name and student number) and submit them to me for tutorial credit.

# Any Questions?

---

- Do you have any questions?
  1. Check piazza
  2. Post the question on piazza  
(unless it's a personal question then email one of the TAs)
- If you have any content that you would like to be added in a Tutorial, please let me know by Friday!
- Email requests to:
  - [abdulgader.saafan@mail.utoronto.ca](mailto:abdulgader.saafan@mail.utoronto.ca) OR
  - [a.seraliyeva@mail.utoronto.ca](mailto:a.seraliyeva@mail.utoronto.ca)
